

VYAVAHAAR

Aapke Vyavahar Mein Hi Humara Pyaar Hai

India's first voice-first social network built for senior citizens
turning digital simplicity into real-life companionship.

Anushka Trivedi- 2430010076

Pitch Deck • AIC Incubation Program • 2026

WHY THIS IDEA

It started with a phone call my grandparent couldn't make alone.

Every time our elders wanted to join a satsang, book a cab, or even video-call a grandchild, they needed someone else to do it for them. Not because they lack the desire to connect; but because every app, every OTP, every tiny icon was built for someone else's generation. **That dependency quietly steals their dignity. Vyavahaar exists to give it back.**

66.4%

of rural elderly report frequent loneliness (Ind. J. Psych. Medicine, 2024)

20%

of India's elderly live alone or only with another senior (PLFS 2023–24)

149M → 347M

India's 60+ population by 2050 (UNFPA, India Ageing Report)

THE PROBLEM

Ageing India is growing fast. Support for it isn't.

Isolation by design

Nuclear families and migration leave 1 in 5 elders alone at home, with no built-in tool to reach out.

Tech built for the young

Small text, cluttered menus, and password logins turn every app into a barrier, not a bridge.

No safe way to gather

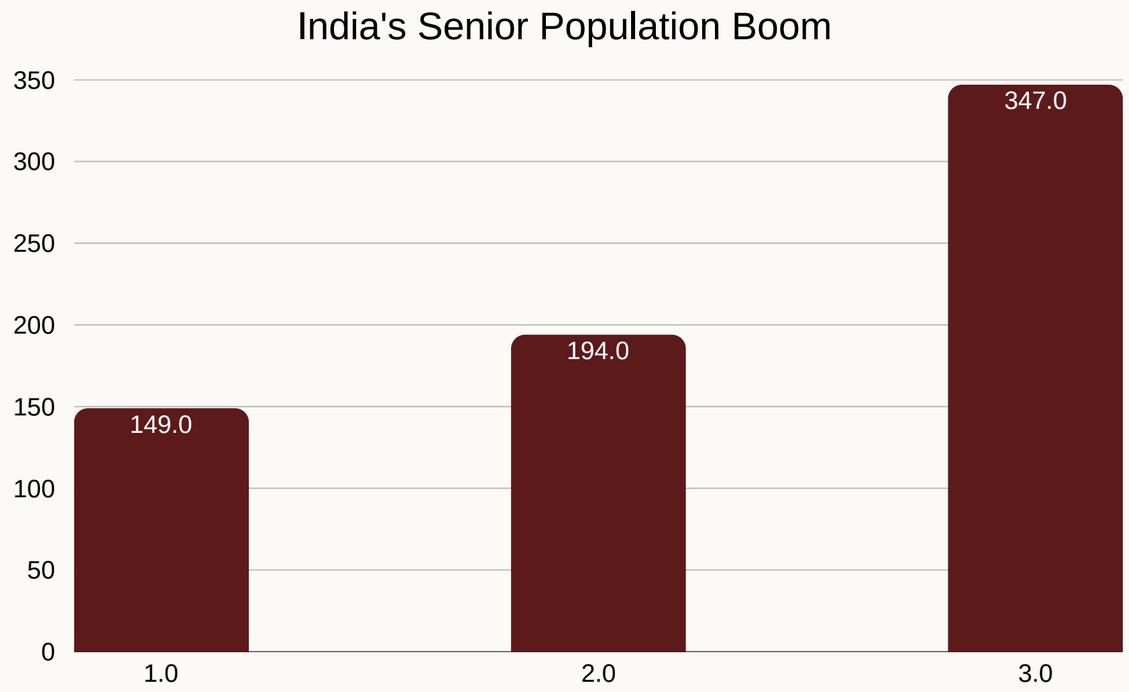

No verified, elder-only space exists for satsangs, walks, yoga, or simply making a new friend nearby.

Total dependency

Booking a cab, joining a video call, or ordering medicine still means waiting for a child or help.

MARKET GAP

A 347-million-person market no one has actually designed for.

	Facebook / IG	Local NGOs	Vyavahaar
Voice-first, no typing	✗	✗	✓
Multi-lingual by default	Partial	✗	✓
Verified elder-only space	✗	Sometimes	✓
Cab / ambulance built-in	✗	✗	✓
Recurring local events	✗	Manual, offline	✓
Digital + real-world bridge	✗	Real-world only	✓

THE SOLUTION

Vyavahaar

A culturally-rooted, AI-powered social network, built exclusively for India's senior citizens.

One voice command replaces ten confusing taps. One platform replaces a dozen favors asked of family. Vyavahaar turns “I need help with this app” into “I did this myself.”

Speak, don't type

"Namaste" greeting, voice commands in Indian languages

Real gatherings

Yoga, satsangs, health camps, walks; online or offline

One-click mobility

Auto cab & ambulance booking for any event or need

Woven into culture

Designed around Indian rituals, festivals & family values

OUR CORE BET

Why a multilingual voice assistant is the whole product, not a feature.

Most senior citizens in India aren't “low-tech’, they're locked out. They didn't grow up typing, and most feel embarrassed asking their children the same question twice. That dependency is the real product gap, and it's the one every mainstream app ignores.

No literacy barrier

A voice command works whether you read Hindi, Tamil, Bengali, or nothing at all.

Independence, not assistance

Users stop asking “beta, can you do this for me” and start doing it themselves.

Speaks their language, literally

Regional-language support means comfort, not translation-app confusion.

Removes the fear of 'breaking' the phone

One spoken word instead of a maze of icons removes the anxiety of using tech.

INSIDE THE APP

Everything an elder needs, nothing they have to figure out.

Voice Assistant

Full app control by speaking - navigate, book, message, join

Profiles & Friend Requests

Instagram-style profile, phone-number based, easy add-a-friend

Chat & Inbox

Simple threaded chat and event inbox with voice-to-text replies

Cab & Ambulance Booking

One-click scheduled rides for events, errands, or medical needs

Events & Gatherings

Satsangs, yoga, morning walks, health camps, online or offline

Video Calls

One-tap Google Meet / Zoom calls with family and new friends

WHERE THIS GOES

From a social app to India's elder-care ecosystem.

1

Phase 1 - Connect

Voice-first social network: profiles, events, chat, cab booking. Prove daily engagement & trust.

2

Phase 2 - Care

In-app doctor consults, medicine ordering, and ambulance dispatch for medical emergencies.

3

Phase 3 - Contribute

A marketplace where elders sell handmade goods, home recipes, and lessons and monetise a lifetime of experience by mentoring the next generation.

4

Phase 4 - Scale

White-label Vyavahaar for NGOs, housing societies, and old-age homes across India, then South Asia.

BUSINESS MODEL

Built to earn trust first so paying feels obvious, not risky.

Subscription

₹99/month unlocks events, automation & voice assistant priced below a single autorickshaw ride

Gifting

Family members buy “tokens of love” to add friends, send gifts & gestures a guilt-free way to show care

Services commission

Small commission on cab bookings, doctor consults & medicine orders

B2B / NGO licensing

White-labelled Vyavahaar for old-age homes, RWAs & elder-care NGOs

Why Indians will actually pay: not for an app, but for what it replaces; cost of a caretaker visit, a missed doctor appointment, or a lonely festival. ₹99 is framed as **peace of mind for the family and dignity for the elder** and the first event is always free.

WHY IT ACTUALLY WORKS

Not just a platform
a trust network with a moat.

Built around the user, not retrofitted

Every screen starts from “can a 68-year-old use this alone,” not “how do we shrink our existing app.”

Phygital by design

Digital simplicity leads to real, offline meetings; the loneliness problem is solved in person, not just in-app.

Network effect that compounds trust

Every verified friend, event and safe cab ride makes the next elder's family more willing to say yes.

Key Risks & How We Handle Them

Low smartphone/data access: Voice-first UI + partner with feature-phone IVR & community kiosks

Trust & safety of strangers meeting: Phone-verified profiles, family co-sign option, in-app SOS button

Regional/language fragmentation: Multi-lingual voice engine, city-by-city language rollout

Family gatekeeping (children control the phone): “Gifting” model turns children into paying advocates, not blockers

GO-TO-MARKET

Start hyperlocal in India.
Expand to every diaspora that misses home.

IN INDIA

- Launch in 2 metro pockets (Delhi NCR, Bengaluru) via RWAs, temples & senior citizen clubs
- Partner with NGOs (HelpAge India-type orgs) already running offline events
- Free entry event as the acquisition hook; children pay via 'gifting'

ABROAD (NRI-LINKED)

- NRIs pay subscriptions/gifts for parents back home a natural extension of care-at-a-distance
- Regional-language events double as cultural continuity for diaspora families visiting India
- Later: mirror model for Indian-origin elders in US/UK/Gulf communities

Run a 90-day pilot across 2 cities; validating retention, event turnout, and willingness-to-pay before scaling nationally.

Vyavahaar is a bridge between generations, hearts, and homes.

Give dignity and connection back to those who gave us everything first.

“Aapke Vyavahaar Mein Hi Humara Pyaar Hai”

Let's build a safer, warmer, more inclusive digital India , together.
